

Kirkton Vet Clinic partnered with Timac Agro to help our clients improve crop yield. Please see the results of Soybeans from last season below.

TIMAC AGRO RESULTS – PERTH COUNTY

Our patented formulas are derived from nearly 60 years of research and development in plant extract technology. Through precise methods, our extracts are evaluated for their specific effects at each stage of crop development. By enriching selected extracts with macro- and micronutrients, we create bio-nutritional formulas that meet the ever-changing needs of the crop.

Fertiactyl is a biostimulant that increases root development, increasing root surface area, which greatly increases water and nutrients' uptake because of humic and fulvic acids on soil nutrient availability. The Fertiactyl contains zeatin and increases the chlorophyll content in both living (drives Yield) and cut tissue (Keeps tissue greener longer, which is an important measure of quality in many crops), and glycine betaine, which helps promote crop tolerance to abiotic stressors, including temperature extremes and water stress (too much or too little).

Fertileader is a biostimulant that uses Seactiv technology, a patented process for chelating minerals with neutrally charged amino acids that enhance foliar uptake of nutrients. Fertileader helps pull more nutrients from the roots to the shoots, keeping nutrients flowing to the growing points. Fertileader intensifies chlorophyll synthesis, which maximizes photosynthesis for energy (the driving force behind high yields and quality).

Bu/Ac

Benefits of Timac Agro Biostimulation Program:

+9 Bu/ac increasing production by 16% compared to grower's standard.

Farmer ROI = \$ 68.10 / acre.

Make a Free appointment today with Timac Agro Agronomic Technical Consultant and let us help you to improve your Silage production.
